

Name: _____ Date: _____

Period: _____

1. The function g is defined by $g(x) = f(x + 3) - 2$. Describe the transformations applied to the graph of f to produce the graph of g .

Horizontal shift left 3 units (because $h = 3 > 0$) and vertical shift down 2 units (because $k = -2$).

2. The table below shows values of f . Complete the table for $g(x) = -f(x)$.

x	-2	-1	0	1	2
$f(x)$	3	1	0	-1	-3
$g(x) = -f(x)$	-3	-1	0	1	3

3. The domain of f is $[-2, 6]$. State the domain of $g(x) = f(x - 4)$.

Domain of g : **$[2, 10]$**

(Shift right 4: add 4 to each endpoint. $-2 + 4 = 2$; $6 + 4 = 10$.)
