

Unit 4: Functions Involving Parameters, Vectors, and Matrices

Name: _____ Date: _____

Period: _____

Learning Targets — I Can...

1. I can write a parametric model for circular motion using transformations of $(x(t), y(t)) = (\cos t, \sin t)$, identifying the radius, center, and orientation from the equations.
2. I can parametrize the line segment between two given points using an initial position and constant rates of change, and evaluate the parametrization at any value of t .
3. I can interpret the parameters in a circular or linear parametrization in a contextual setting, including finding when a circular path reaches a maximum or minimum height.

What's in This Packet

#	Component	Description	Score
1	Warm-Up	Spiral Review: Trig Values & Transformations	_____
2	Guided Notes	Circular and Linear Parametrizations	_____
3	Group Activity	Satellite Orbit & Rover Path	_____
4	Exit Ticket	Circles and Segments Check	_____
5	Homework	Parametrically Defined Circles and Lines Practice	_____
Total			_____
