1. The equation $4x^2 + 9y^2 = 36$ describes an ellipse.

(a) For $x = 3$, find all values of y . Show your work.

$$y = \underline{\hspace{2cm}}$$

(b) For $x = 0$, find all values of y . Show your work.

$$y = \underline{\hspace{2cm}}$$

2. Consider moving along the **upper half** of the ellipse $4x^2 + 9y^2 = 36$ from the point $(3, 0)$ toward the point $(0, 2)$.

(a) As x decreases from 3 to 0, does y increase or decrease?

(b) Is the co-variation between x and y positive or negative? Explain.
