1. Given $\sin \theta = \frac{\sqrt{3}}{2}$ and $\cos \theta = \frac{1}{2}$, compute $\tan \theta$. Show your work.

$$\tan \theta = \frac{\sin \theta}{\cos \theta} = \underline{\hspace{4cm}}$$

2. State the period and the location of the two positive vertical asymptotes closest to $\theta = 0$ for the function $g(\theta) = \tan(2\theta)$.

Period of g : _____

Asymptotes (two positive values closest to 0): $\theta = \underline{\hspace{2cm}}$ and $\theta = \underline{\hspace{2cm}}$

3. For the parent function $y = \tan \theta$, the graph is always _____ (increasing / decreasing) between consecutive asymptotes, and changes from concave _____ to concave _____ within each period.
