

AP Precalculus

Unit 3: Trigonometric and Polar Functions

Lesson 3.9 Inverse Trigonometric Functions

Name: _____ Date: _____

Period: _____

Learning Targets — I Can...

1. I can explain why the domain of the sine, cosine, and tangent functions must be restricted in order to define their inverses.
2. I can evaluate $\arcsin x$, $\arccos x$, and $\arctan x$ and interpret the output as a principal-value angle measure.
3. I can state the domain and range of each inverse trigonometric function and use them to evaluate compositions.

What's in This Packet

#	Component	Description	Score
1	Warm-Up	Evaluating trig, domain & range review	_____
2	Guided Notes	Restricted domains; evaluating inverse trig	_____
3	Group Activity	Tiers R/A/E — inverse trig practice	_____
4	Exit Ticket	Evaluate & explain domain restriction	_____
5	Homework	Practice + AP-style MC + composition extension	_____
Total			_____
