Spiral Review

1. A particle's x -position is $x(t) = t^2 - 6t$. Complete the table of values.

t	0	1	2	3	4	5	6
$x(t)$	_____	_____	_____	_____	_____	_____	_____

2. Find the vertex of $y = -t^2 + 4t + 5$. What is the maximum value of y ?

3. Solve $t^2 - 9 = 0$.

$t =$ _____

A particle moves with $x(t) = t^2 - 9$. What do the solutions above tell you about the particle's position? (Hint: when is it on the y -axis?)
